12/25/83 <sup>O.K. NOW</sup> plant came on 0600 and showed 3 wells running but only 700 gal coming into plant. There for would not cut in on feeders and such. Checked wells on board and show no water coming in from #2 well.

I suspect a busted check valve on #2 well. <sup>not 100%</sup> will have well man check it out when he comes in at 0800. (Linnans) (P.S. no failure light came on)

Wages of 648 #2

12/25/83 day shift at TT 38 did not gas part. Trucks two men on watch at the time. Very little gas for the 4-17 and 12-8 watches. (Linnans)

12-25-83 0748 Riggs repeated elevated tank & service water telemeter out at TT.

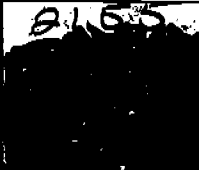

<sup>FIXED</sup> 12-25-83 0830 <sup>FIXED</sup> #2 well will not run auto. <sup>HB(648)</sup>

12-25-83 <sup>HB-670</sup> Do not run pumps in Backwash holding Pond. Sewage plant man turned off pumps in lift station.

12-25-83 TT-67 4" valve bursted in well. Top hatch had blown off well house.

JAK

12-26-83 - TT-1545 - TT-2 school main water  
break TT-4B. Emergency main notified.

12-26-83 - 1600 - Steam plant operator at M.P. reported he had  
only 30 lbs of pressure and that he was afraid he was going to have  
to shut down steam plant. Campbell went to M.P. first thing  
and reported to me that pressure at plant was minimal and  
that he could not find any leaks between plants. At 1815 I got  
a call from Mr. William Central heating and he said his man  
at M.P. said he was down to 22 PSI and would soon have to  
shut down. Went to M.P. with Campbell - checked at plant  
and it was ok. (Elevated tanks nearly full) went to steam  
plant - they had 30 PSI and were running both softeners  
full blast. Believe they were using about all the water they  
could get through the lines.

Campbell was more worried about TT's water. They have  
many small leaks in the ceiling of the Q tag. I do  
not know of any major leaks but with having TT-67 they  
are having a problem. Campbell will keep me apprised of  
any change.

A.S. Barber, James & Kelly RR. Addison CHB. - Kelly

2-25-84 - Campbell reported water in M.P. Pool "too hot to take a  
bath in". He said he cut off heat and was adding water to  
cool it down. UMACS closed for week-end. (SP) Helter reported  
temp. was over 90° even after adding water.

2-25-84 - 1351 - M.P. Reservoir Telemeter not working  
properly.

2-27-84 - HB-670 - Had problems with South Inflow  
valves closing. Also note of wood saw to be  
set at 9-9 1/2 <sup>MBD</sup> on South System to get the  
gauge back the wood to slow 8 MBD. And  
the pump valve % gauge on #1 system does  
not work. This will be all until tonight.

5/6/84 \*\*\* Call from Mr. Sypniew about boat moq 2003  
gas leak. The gas is leaking through  
carb. onto pump base. Had enough to  
blow building up. Called fire dept. to  
check out. Told Dick to cut gas off  
until it can be fixed, also need cover  
an electric solenoid valve in same building (200)  
DS - gas motor over heats and blows radiator caps  
off engine. (Common)

5/6/84 automatic controls need checking out on low  
and high, on and off sides. also a crack in mani-  
fold on water jacket. (Common)

5-7-84 - STILL HAVING PROBLEMS WITH #1 IHF  
VALVE. IT WILL NOT OPEN AFTER REWASHING. CAN  
GET IT OPEN BY CUTTING #3 HIGH LIFT PUMP ON.

MAY 12 1984 - Campbell reported that L. PARKER told him that the TT pool had been overfilled. He said the tunnel fill valve off at 1500. Campbell said pool had filled and run over instead of running out over flow (Mr Campbell said over flow is too high.) Emergency maint called at 1630 and said they had reports of pool overflowing. I informed them we were aware of it and had taken care of the problem. (SP)
