

Date: 18 August 1982

Memorandum for the Record

From: Ms. Betz, Quality Control Lab., Environmental Section, NREAB, BMaintDiv

Subj: Trihalomethane Sampling for August 1982

1. Sampling was initiated on 17 August 1982, by Gaines Huneycutt and Elizabeth B Betz. The New River Air Station system was collected. In addition to the regular distribution system samples, 4 samples from different points in the treatment process and all 24 (in service) raw water wells were taken at the New River system.
2. On 18 August 1982, Gaines Huneycutt collected the samples from the Rifle Range system.
3. The federal and state regulations only call for quarterly sampling. Since monthly sampling from April through July, did not show any problems in the Hadnot Point, Tarawa Terrace, Montford Point (Camp Johnson), Holcomb Blvd., Courthouse Bay or Onslow Beach systems, these systems were reduced to quarterly sampling. The next sampling will be done sometime between September and November 1982. The New River system will continue to be monitored monthly, while the Utilities Branch makes some changes. The Rifle Range system will be monitored monthly as a protective measure against the Chemical Landfill.
