BETSY,

THE AGENCY FOR TOXIC SUBSTANCES AND DISEASE REGISTRY (ATSDR) HAS INQUIRED AS TO THE FREQUENCY AND TYPE OF LABORATORY ANALYSIS THAT WAS BEING CONDUCTED ON THE TREATED EFFLUENT LEAVING THE MAIN WATER TREATMENT PLANT AT THE TIME OF THE DISCOVERY OF TCE IN THE WATER SUPPLY WELL #651 (ALONG OLD PINEY GREEN ROAD) IN 1985.

I TALKED WITH MAC FRAZELLE LAST THURSDAY AND HE INFORMED ME THAT EITHER YOU OR MR SHARPE WOULD BELDGY E ON BASE TO KNOW THE FULL STORY ON THE FREQUENCY AND METHODOLOGY OF THE ANALYTICAL PROCEDURES CONDUCTED AT THAT TIME.

ATSDR IS INTERESTED IN KNOWING WHAT TYPES OF ANALYSES AND AT WHAT FREQUENCY THESE ANALYSES WERE PERFORMED ON THE INDIVIDUAL SUPPLY WELLS AS WELL AS THE TREATED EFFLUENT FROM THE WATER TREATMENT PLANT. THEY ADDITIONALLY ARE INTERESTED IN HOW WELL #651 WAS DISCOVERED TO BE CONTAMINATED IN THE FIRST PLACE. WAS THERE AN ESTABLISHED SCHEDULE FOR TESTING SUPPLY WATER WELLS AND THE EFFLUENT FROM THE WATER TREATMENT PLANT OR WAS THIS JUST DONE PERIODICALLY AS SPOT CHECKS?

IT WOULD SEEM THAT THEIR MAIN CONCERN IS IN THE LEVEL OF TCE CONTAMINATION THAT INDIVIDUALS MIGHT HAVE BEEN EXPOSED TO PRIOR TO WELL #651 BEING TAKEN OUT OF SERVICE.

PLEASE CONTACT ME WITH ANY INFORMATION THAT YOU CAN PROVIDE OR IF YOU HAVE ANY QUESTIONS OR COMMENTS.

THANKS,  
R/S

THOMAS S. MORRIS
