Fred,
As you are aware, past operations from ABC Cleaners has caused groundwater contamination to migrate across HWY 24 effecting government owned raw water wells adjacent to Tarawa Terrace I housing area. In connection with that situation EPA has been conducting studies over the last couple of years to determine how to correct the groundwater contamination problem.

Accordingly, we have been notified that EPA has awarded a contract for the groudwater clean-up. The contractor (Foster Wheeler Envir. Corp.) plans to be on site to begin work on 15 Dec. The construction includes the installation of monitoring wells, groundwater recovery piping and a small systems control building. The site is on government property located just off of the railroad right-of-way adjacent to the recreation area at the TT-I entrance (Tarawa Blvd).

Installation of the groundwater recovery system should be completed by 1 March 98. After that an EPA contractor will monitor system performance on a biweekly basis.

We have a set of construction plans that are available for review if anyone is interested.

Unless you have other guidance, I have appointed John Jordan as liaison between the EPA contractor and the Base. John has names of points of contact with EPA and the contractor should any questions arise.

R/S
