14 JUN 1988

From: Commander, Atlantic Division, Naval Facilities Engineering Command
 To: Commanding General, Marine Corps Base, Camp Lejeune

Subj: REMEDIAL INVESTIGATION/FEASIBILITY STUDY OF CONTAMINANT SOURCES IN
 HADNOT POINT INDUSTRIAL AREA

Encl: (1) Characterization Step Report for Hadnot Point Industrial Area with
 Appendices (8 copies)
 (2) Feasibility Study for Hadnot Point Industrial Area (8 copies)
 (3) ESE Ltr No. 86-601-0100 of 11 May 88
 (4) Tentative Agenda for Technical Review Committee Meeting

1. Enclosures (1) and (2) are final characterization and feasibility study reports for the shallow aquifer in the Hadnot Point Industrial Area (HPIA). Environmental Science and Engineering's (ESE) response to comments not included in the feasibility study are forwarded as enclosure (3). Please distribute enclosures (1) and (2) to members of the Technical Review Committee (TRC) for review and comment.

2. We suggest you schedule a meeting of the TRC for early August. By that time, each member should have had an opportunity to review the reports and should be prepared to present their comments. We/ESE can give an overview of the IR program and specifics on the investigation in the HPIA. Suggest you be prepared to address base implementation of the interim alternatives recommended in the feasibility study report and to give an overview of your community relations plan.

3. We can discuss the agenda and follow on efforts in the HPIA at your base steering committee meeting, tentatively scheduled for 2 August 1988. Please keep us informed as to dates and times for these meetings. Our point of contact is Cheryl Barnett.
