

FINAL
REMEDIAL INVESTIGATION REPORT
OPERABLE UNIT NO. 11 (SITE 80)

MARINE CORPS BASE
CAMP LEJEUNE, NORTH CAROLINA

APPENDICES

CONTRACT TASK ORDER 0274

APRIL 5, 1996

Prepared For:

DEPARTMENT OF THE NAVY
ATLANTIC DIVISION
NAVAL FACILITIES
ENGINEERING COMMAND
Norfolk, Virginia

Under:

LANTDIV CLEAN Program
Contract N62470-89-D-4814

Prepared by:

BAKER ENVIRONMENTAL, INC.
Coraopolis, Pennsylvania

APPENDIX A
FIELD INVESTIGATION DOCUMENTATION

Sample Number ¹⁴	Sample Description/Type ¹⁵	Date/Time Collected ¹⁶	Container Type ¹⁷	Sample Volume ¹⁸	Pre-servative ¹⁹	Requested Testing Program ²⁰	Condition on Receipt ²¹	Disposal Record No. ²²
3-MW01-01	GROUND WATER	7/13 2020	Vial Amber	2,40ml 2,1L	HCL -	TCL VOA TCL SVOA	Rec'd at 23°C with custody seals intact BGA 7/17/95	
3-MW03-02	↓	7/13 1700	Vial Amber	2,40ml 2,1L	HCL -	TCL VOA TCL SVOA		
3-MW13-01		7/13 1920	Vial Amber	2,40ml 2,1L	HCL -	TCL VOA TCL SVOA		
3-MW13-01 3-RB20		WATER	7/14 0815	Vial Amber	2,40ml 2,1L	HCL -		TCL VOA TCL SVOA
3-RB21		↓	7/14 0845	Vial Amber	2,40ml 2,1L	HCL -	TCL VOA TCL SVOA	
80-RB22	↓	7/14 0745	Amber	2,1L	-	TCL PESTICIDES		
80-MW08-01 80-MW08-01		GROUND WATER	7/14	Amber	2,1L	-	TCL PESTICIDES	
FB-11		WATER	7/14 0900	Vial	2,40ml	HCL	TCL VOA	
FB-11	↓		AMBER	2,1L	-	TCL SVOA		

Special Instructions: ²³

Possible Hazard Identification: ²⁴
 Non-hazard Flammable Skin Irritant Poison B Unknown

Sample Disposal: ²⁵
 Return to Client Disposal by Lab Archive (mos.)

Turnaround Time Required: ²⁶
 Normal Rush

GC Level: ²⁷
 I. II. III. Project Specific (specify):

1. Relinquished by ²⁸ <i>MD Smith</i>	Date: <i>7-14-95</i> Time: <i>1200</i>	1. Received by ²⁸ <i>Ron Anderson</i>	Date: <i>7/17/95</i> Time: <i>0830</i>

Re: Contract N62470-89-D-4814
Navy CLEAN, District III
Contract Task Order (CTO) 0274
IDW Sampling and Analysis
Operable Units No. 8, 11, and 12
MCB Camp Lejeune, North Carolina

Dear Ms. Landman:

This letter report describes the sample collection activities, analysis, results, and recommendations for the disposition of investigation-derived waste (IDW) present at Sites 16, 7, 80, and 3, Marine Corps Base, Camp Lejeune, North Carolina. The IDW contained in 1,000 gallon tankers, 55 gallon drums, and lab packs, were generated during the period from September 15 to December 4, 1994, during the Baker Environmental, Inc. (Baker) remedial field investigation. An inventory of the IDW along with individual site quantities are provided in Table 1. Analytical results are provided in Attachment A.

Sample Collection and Analysis

Site 16

Two liquid samples were collected from Site 16. The first sample was collected from the well development and purge water holding tank and was given the sample identification 16-TK-01. Sample 16-TK-01 was analyzed for full Target Compound List (TCL)-Organics and Target Analytic List (TAL)-Inorganics.

The second sample was collected from a (55 - gallon) drum containing decontamination fluids. This sample was given the identification 16-DRM-01. Sample 16-DRM-01 was placed on ice and then was composited with decontamination fluids from other sites and given the sample identification 274-DRM-01. Sample 274-DRM-01 was analyzed for full TCL-Organics and TAL-Inorganics. The types and quantities of IDW for Site 16 are provided on Table 1. Analytical results for Site 16 are provided in Attachment A. Note, additional drums of decontamination fluids were also generated at lot 203 (field trailer). These drums were sampled along with all the site decontamination fluids and composited for sample 274-DRM-01. The decontamination fluids generated at Lot 203 are presented on Table 1.

Site 7

Two liquid samples were collected from Site 7. The first sample was collected from the well development and purge water holding tank and was given the sample identification 7-TK-01. Sample 7-TK-01 was analyzed for full TCL-Organics and TAL-Inorganics.

The second sample was collected by compositing two (55 - gallon) drums containing decontamination fluids. This sample was given the identification 7-DRM-01. Sample 7-DRM-01 was placed on ice and then was composited with decontamination fluids from other sites and given the sample identification 274-DRM-01.

A Total Quality Corporation

Baker

Ms. Katherine Landman
January 19, 1995
Page 2

Sample 274-DRM-01 was analyzed for full TCL-Organics and TAL-Inorganics. The types and quantities of IDW for Site 7 are provided on Table 1. Analytical results for Site 7 are provided in Attachment A.

Site 80

Two liquid samples were collected from Site 80. The first sample was collected from the well development and purge water holding tanks and was given the sample identification 80-TK-01. Sample 80-TK-01 was collected by compositing the water from both holding tanks, and was analyzed for full TCL-Organics and TAL-Inorganics.

The second sample was collected from a (55 - gallon) drum containing decontamination fluids. This sample was given the identification 80-DRM-01. Sample 80-DRM-01 was placed on ice and then was composited with decontamination fluids from other sites and given the sample identification 274-DRM-01. Sample 274-DRM-01 was analyzed for full TCL-Organics and TAL-Inorganics. The types and quantities of IDW for Site 80 are provided on Table 1. Analytical results for Site 80 are provided in Attachment A.

Site 3

One solid composite sample (3-RB-01) was collected from Site 3. This composite sample was comprised of drilling mud cuttings. One representative sample was collected from each of the six (55 - gallon) drums. These samples were in turn placed into a stainless steel bowl and homogenized prior to sample packaging. Sample 3-RB-01 was analyzed for RCRA hazardous waste characteristics including TCLP, ignitability, corrosivity, reactivity, and TCL PCBs.

Two liquid samples were collected from Site 3. The first sample was collected from the well development and purge water holding tank and was given the sample identification 3-TK-01. Sample 3-TK-01 was analyzed for full TCL-Organics and TAL-Inorganics.

The second sample was a composite sample from two (55 - gallon) drums of decontamination fluids. This sample was given the identification 3-DRM-01. Sample 3-DRM-01 was placed on ice and then was composited with decontamination fluids from other sites and given the sample identification 74-DRM-01. Sample 274-DRM-01 was analyzed for full TCL-Organics and TAL-Inorganics. The types and quantities of IDW for Site 3 are provided on Table 1. Analytical results for Site 3 are provided in Attachment A.

In addition to the solid and liquid IDW generated from Site 3, the ENSYS field screening investigation conducted at Site 3 generated approximately ten (10) liters of waste methanol. The waste methanol is stored in 10 - one liter glass bottles. These glass containers have been lab packed into two 5 - gallon plastic buckets with 5 containers in each bucket. A sample of the waste methanol was not collected due to waste methanol being a F - listed waste (F003), and proper disposal to a licensed Treatment Storage Disposal Facility (TSDF) is necessary.

Results

Site 16

Sample 16-TK-01 had only two positive volatile detections, one positive detection for semivolatiles, and no positive detections for pesticides/PCBs. Inorganic analysis did not indicate concentrations above what previous background groundwater analysis has indicated for inorganics. Concentrations of all contaminants did not exceed regulatory standards for classification as hazardous by characteristic (40CFR 261.24).

Sample 274-DRM-01 which is a composite sample of the decontamination fluids from all sites including Site 16, indicated positive detections for three volatile contaminants, five positive detections for semivolatiles, and one positive detection for pesticides. Inorganic analysis did not indicate concentrations above background for inorganics. Concentrations of all contaminants did not exceed regulatory standards for classification as hazardous by characteristic (40CFR 261.24).

Baker

Ms. Katherine Landman

January 19, 1995

Page 3

Site 7

Sample 7-TK-01 had three positive volatile detections, and no positive detections for either semivolatile, or pesticide/PCB analysis. Inorganic analysis did not indicate concentrations above what previous background groundwater analysis has indicated for inorganics. Concentrations of all contaminants did not exceed 40CFR 261.24 standards.

Results of sample 274-DRM-01 which is a composite sample of the decontamination fluids from all sites, including Site 7, are provided in the results for Site 16.

Site 80

Sample 80-TK-01 had four positive volatile detections, and no positive detections for either semivolatile, or pesticide/PCB analysis. Inorganic analysis did not indicate concentrations above what previous background groundwater analysis has indicated for inorganics. Concentrations of all contaminants did not exceed 40CFR 261.24 standards.

Results of sample 274-DRM-01 which is a composite sample of the decontamination fluids from all sites, including Site 80, are provided in the results for Site 16.

Site 3

Sample 3-TK-01 had seven positive volatile detections, eleven positive semivolatile detections, and one positive detection for pesticides. Inorganic analysis did not indicate concentrations above previous background groundwater analysis has indicated for inorganics. Concentrations of all contaminants did not exceed 40CFR 261.24 standards.

Results of sample 274-DRM-01 which is a composite sample of the decontamination fluids from all sites, including Site 3, are provided in the results for Site 16.

Sample 3-RB-01 which was analyzed for RCRA hazardous waste characteristics, TCLP, and TCL-PCBs, had three positive volatile detections, and no positive detections for either semivolatiles and pesticides/herbicides. Also, PCB analysis indicated no positive detections, and inorganic analysis had one positive detection. Concentrations of all contaminants did not exceed 40CFR 261.24. Sample 3-RB-01 was not found to be reactive to sulfide and cyanide, be ignitable at less than 140 ° F, or be corrosive at less than 2 or greater than 12.

The waste methanol generated during the ENSYS soil investigation at Site 3 was not sampled. The methanol is a F - listed waste (F003), and proper disposal to a licensed TSDF is necessary.

Conclusions and Recommendations

Site 16

Analytical results indicate that samples 16-TK-01, and 274-DRM-01 have low level organic contaminant concentrations. These concentrations do not exceed regulatory values which would classify these samples as hazardous by characteristic. Therefore, the well development/purge water and the decontamination fluid will be disposed of onsite.

Baker

Ms. Katherine Landman
January 19, 1995
Page 4

Site 7

Analytical results indicate that samples 7-TK-01, and 274-DRM-01 have low level organic contaminant concentrations. These concentrations do not exceed regulatory values which would classify these samples as hazardous by characteristics. Therefore, the well development/purge water and the decontamination fluid will be disposed of onsite.

Site 80

Analytical results indicate that samples 80-TK-01, and 274-DRM-01 have low level organic contaminant concentrations. These concentrations do not exceed regulatory values which would classify these samples as hazardous by characteristics. Therefore, the well development/purge water and the decontamination fluid will be disposed of onsite.

Site 3

Analytical results indicate that samples 3-TK-01, and 274-DRM-01 have low level organic contaminant concentrations. These concentrations do not exceed regulatory values which would classify these samples as hazardous by characteristics. Therefore, the well development/purge water and the decontamination fluid will be disposed of onsite.

Analytical results for sample (3-RB-01, drilling mud cuttings) indicate low level volatile contaminant concentrations. The RCRA hazardous waste characteristics show this sample to be non-hazardous. The TCLP and RCRA results do not exceed regulatory values which would classify this sample as hazardous by characteristics. Therefore, these drilling mud cuttings will be disposed of onsite.

The 10 liters of waste methanol will be packaged and removed from the base by a licensed waste hauler, and shipped to a licensed treatment, storage disposal facility (TSDF) for disposal in a certified fuels or incineration program.

Upon LANTDIV's approval of these disposal recommendations, the IDW will be managed as identified within this letter.

If you have any questions, please do not hesitate to contact me at (412) 269-2053.

Sincerely,

Baker Environmental, Inc.

Matthew D. Bartman

TCLP VOLATILES ANALYSIS

Laboratory Name:	Quanterra-Knoxville	Job Number:	2220
Contract Name:	Quanterra-Export	TCLP Date:	N/A
Client Sample ID:	3-RB-01	Analysis Date:	12/10/94
Lab Sample ID:	AD2064	Sample Matrix:	Soil
Concentration Units:	mg/liter (ppm) in the leachate		

Compound	Concentration	Qualifier	Detection Limit
benzene	0.025	U	0.025
carbon tetrachloride	0.025	U	0.025
chlorobenzene	0.005	J	0.025
chloroform	0.025	U	0.025
1,2-dichloroethane	0.025	U	0.025
1,1-dichloroethene	0.025	U	0.025
methyl ethyl ketone	0.075	+	0.050
tetrachloroethene	0.006	J	0.025
trichloroethene	0.025	U	0.025
vinyl chloride	0.050	U	0.050

+ - Positive result.
 J - Indicates an estimated value less than the detection limit.
 U - Compound was analyzed for but not detected. The number is the detection limit for the sample.

TCLP SEMIVOLATILES ANALYSIS

Re: Contract N62470-89-D-4814
Navy CLEAN, District III
Contract Task Order (CTO) 0274
Operable Units No. 8, 11, and 12
Sites 3, 7, 16, and 80 IDW Removal
MCB Camp Lejeune, North Carolina

Dear Ms. Landman:

This letter report presents a summary of investigation-derived waste (IDW) disposal activities at Sites 3, 7, 16, and 80, Marine Corps Base, Camp Lejeune, North Carolina. The IDW generated during the remedial investigation conducted from October 10, 1994 through December 4, 1994, was contained in roll-off boxes, 1000 gallon tanks, and 55-gallon drums.

In a letter dated January 19, 1995, Baker Environmental provided the sample collection, analytical findings, conclusions and recommendations with respect to the IDW handling and disposal. The recommendations were subsequently approved by the Navy/Marine Corps. The remainder of this letter report provides a summary of the disposal activities conducted under this CTO.

DISPOSAL

Based on LANTDIV/MCB Camp Lejeune approval, Baker arranged for the disposal of the following:

- 3,850 gallons of nonhazardous well development and purge water
- 400 gallons of nonhazardous decontamination fluids
- 40 cubic feet of drilling mud

Based on the nonhazardous determination, all IDW was deposited back onto the site in which it was generated.

In addition, Baker arranged for Four Seasons Inc., (IDW subcontractor) to remove nine (9) liters of waste methanol from Lot 203. This waste was generated during the EnSys investigation performed at Site 3. The subcontractor was also required to transport the waste methanol to Ecoflo Inc., a licensed Treatment Storage Disposal Facility (TSDF) located in Greensboro, North Carolina. The signed hazardous waste manifest, along with the material characterization form, land disposal restrictions notification and certification form, lab pack certification, and drum inventories are provided in Attachment A.

A Total Quality Corporation

INSTRUCTIONS: In Column 1, identify all USEPA hazardous waste codes that apply to this waste shipment. In Column 2, indicate the appropriate Treatability Group Non-WasteWater (NWW) or WasteWater (WW) for each waste code. Place a check in Column 3 if the waste is California Listed. Also, check the appropriate California List constituent in Table - 2. In Column 4, enter the appropriate Subcategory Key # from Table - 4, if applicable, and also enter "Debris" in Column 4 if the waste is debris that will be treated using one of the alternative treatment technologies provided by 268.45. In Column 5, reference the appropriate Waste Management paragraph(s) from Table - 3 of this form. In Column 6, enter the Reference Number or Numbers from Table - 1 for all regulated constituents associated with F001-F005, F039, 0001, 0002 and D012-0043. Also, if the waste is a debris, enter in Column 6 the Reference Number or Numbers from Table - 1 of the contaminants subject to treatment.

LAB PACK CERTIFICATION

Generator Name: Marine Corp Base - Camp Lejeune

Manifest Doc. No.: F 1008

EPA ID Number: NC617 002 2580

State Manifest Doc. No.: _____

If your waste is packaged in lab packs and does NOT include waste codes listed on Appendix IV (see below), the following certification must be completed and the respective container numbers listed. Use additional sheets if necessary. If any lab pack containers INCLUDE waste codes listed in Appendix IV, the LDR Notification and Certification Form must be completed for those containers and the corresponding waste codes.

Check this box if using a continuation sheet.

Container number(s):

MCB-01	MCB-02						

APPENDIX IV

Table 3 - Waste Management

A THIS RESTRICTED WASTE REQUIRES TREATMENT TO THE APPLICABLE STANDARD

This waste must be treated to the applicable treatment standard set forth in 40 CFR Part 268 Subpart D, 268.32, or RCRA Section 3004(d) prior to land disposal.

B THIS RESTRICTED WASTE HAS BEEN TREATED TO THE PERFORMANCE STANDARDS

I certify under penalty of law that I have personally examined and am familiar with the treatment technology and operation of the treatment process used to support this certification and that, based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the treatment process has been operated and maintained properly so as to comply with the performance levels specified in 40 CFR Part 268 Subpart D, and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004(d) without impermissible dilution of the prohibited waste. I am aware that there are significant penalties for submitting a false certification, including the possibility of a fine and imprisonment.

C THIS RESTRICTED WASTE, FOR WHICH THE TREATMENT STANDARD IS EXPRESSED AS A SPECIFIED TECHNOLOGY, HAS BEEN TREATED BY THE SPECIFIED TECHNOLOGY

I certify under penalty of law that the waste has been treated in accordance with the requirements of 40 CFR 268.42. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.

D. THIS RESTRICTED WASTE CAN BE LAND DISPOSED WITHOUT FURTHER TREATMENT

I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in 40 CFR Part 268 Subpart D and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004(d). I believe that the information I submitted is true, accurate and complete. I am aware that there are significant penalties for submitting a false certification including the possibility of a fine and imprisonment.

E. THIS RESTRICTED DEBRIS HAS BEEN TREATED IN ACCORDANCE WITH 40 CFR 268.45

I certify under penalty of law that the debris has been treated in accordance with the requirements of 40 CFR 268.45. I am aware that there are significant penalties for making a false certification, including the possibility of fine and imprisonment.

Table 4 - Subcategories

WASTE CODES	KEY #	SUBCATEGORY
D001	1 2 3	High TOC ignitable liquids (High TOC NWW). Low TOC ignitable liquids managed in CWA, CWA-equivalent, or Class 1 SDWA systems. Low TOC ignitable liquids not managed in CWA, CWA-equivalent, or Class 1 SDWA systems.
D002	4 5	Corrosive waste managed in CWA, CWA-equivalent, or Class 1 SDWA systems. Corrosive waste not managed in CWA, CWA-equivalent, or Class 1 SDWA systems.
D003	6 7 8 9 10	Reactive sulfides Explosives. Other reactives. Waste reactives Reactive cyanides.
D006	11 12	Cadmium. Cadmium containing batteries.
D008	13 14	Lead. Lead acid batteries.
D009	15 16 17 18	High mercury NWW's \geq 260 ppm with organics (and are not incinerator residues). High mercury NWW's \geq 260 ppm with inorganics (including incinerator residues and residues from RMERC). Low mercury NWW's \leq 260 ppm. All D009 WWS
F003 F005	19	Wastes that contain any combination of one or more of the following solvents as the only listed F001-5 solvents: carbon disulfide, cyclohexanone, and/or methanol.
F005	20 21	Containing 2-Fluoropropane as the only F001-5 solvent. Containing 2-Ethoxyethanol as the only F001-5 solvent.
F025	22 23	Light Ends. Spent filters/solids and desiccants.
K006	24 25	Anhydrous. Hydrated.
K069	26 27	--- Calcium Sulfate (Low Lead). Non-Calcium Sulfate (High Lead).
K071	28 29 30	Residues from RMERC. Other nonwastewaters. All K071 wastewaters.
K106	31 32 33 34	NWW's containing \geq 260 ppm total mercury. Residues from RMERC $<$ 260 ppm total mercury. Other nonwastewaters $<$ 260 ppm total mercury. All K106 wastewaters.
P047	35 36	4,6-Dinitro-o-cresol 4,6-Dinitro-o-cresol salts
P065	37 38 39 40 41	Nonwastewaters not incinerator or RMERC residues. Nonwastewaters from incinerator or RMERC residues containing \geq 260 ppm mercury. Nonwastewaters from RMERC residues containing $<$ 250 ppm mercury. Nonwastewaters from incinerator residues containing $<$ 260 ppm mercury. All P065 wastewaters.
P092	42 43 44 45 46	Nonwastewaters not incinerator or RMERC residues. Nonwastewaters from incineration or RMERC containing \geq 260 ppm total mercury. Nonwastewaters from RMERC residues containing \leq 260 ppm total mercury. Nonwastewaters from incinerator residues containing \leq 260 ppm total mercury. All P092 wastewaters.
U151	47 48 49 50	Nonwastewaters containing \geq 260 ppm total mercury. Nonwastewaters from RMERC residues only, containing $<$ 260 ppm total mercury. Nonwastewaters not from RMERC residues containing $<$ 260 ppm total mercury. All U151 wastewaters.
U240	51 52	2,4-D (2,4-Dichlorophenoxyacetic acid). 2,4-D salts and esters.

80MW07 RISING HEAD TEST

AQTESOLV

GERAGHTY
& MILLER, INC.

Modeling Group

A Q T E S O L V R E S U L T S
Version 1.10

03/06/95

12:53:34

=====

TEST DESCRIPTION

Data set..... B:80MW07R.DAT
Data set title..... 80MW07 RISING HEAD TEST

Knowns and Constants:

No. of data points..... 46
Radius of well casing..... 0.083
Radius of well..... 0.25
Aquifer saturated thickness..... 15.04
Well screen length..... 15
Static height of water in well..... 15.04
Log(Re/Rw)..... 3.142
A, B, C..... 0.000, 0.000, 2.989

=====

ANALYTICAL METHOD

Bouwer-Rice (Unconfined Aquifer Slug Test)

=====

RESULTS FROM STATISTICAL CURVE MATCHING

STATISTICAL MATCH PARAMETER ESTIMATES

	Estimate		Std. Error
K =	8.7382E-002 +/-		9.3715E-003
y0 =	6.2815E+001 +/-		1.5700E+001

ANALYSIS OF MODEL RESIDUALS

residual = calculated - observed
weighted residual = residual * weight

Weighted Residual Statistics:

Number of residuals..... 46
Number of estimated parameters.... 2
Degrees of freedom..... 44
Residual mean..... 0.2013
Residual standard deviation..... 0.5159
Residual variance..... 0.2662

Model Residuals:

Time	Observed	Calculated	Residual	Weight
0.0166	8.086	8.4106	-0.32464	1
0.02	6.968	5.5715	1.3965	1
0.0233	2.087	3.7358	-1.6488	1
0.0266	3.181	2.5049	0.67612	1
0.03	1.006	1.6593	-0.65333	1

APPENDIX F
BASE BACKGROUND SOIL REPORT

Appendices F.1 and F.2 provide background concentration values for inorganic elements in surface and subsurface soil respectively at MCB, Camp Lejeune. These background borings were collected in areas known to be unimpacted by site operations, and have also been collected during Baker Remedial Investigations since 1993. Both appendices have all background borings identified with a unique sample identification, and the inorganic analytical results pertaining to the sample identification. Provided in the back of each appendix, are the following statistics for the base background samples:

- minimum concentration per inorganic analyte
- maximum concentration per inorganic analyte
- average concentration per inorganic analyte
- twice the average concentration per inorganic analyte.

The minimum and maximum concentrations are used for a comparison bases only. Whereas twice the average concentration is used in comparing the inorganic analytical results from the on-site soil samples to what is considered by USEPA Region IV to be naturally occurring.

1.0 INTRODUCTION

Numerous groundwater investigations have been conducted at Marine Corps Base (MCB), Camp Lejeune under the Department of the Navy (DON) Installation Restoration Program (IRP). These studies have identified elevated levels of total metals in shallow groundwater at almost every site. The degree of contamination, based on dissolved metals analysis of groundwater samples, is limited. It is believed that the presence of elevated metals are not always related to past disposal activities for several reasons, which is the basis of this study.

Currently, Records of Decision (ROD) are being prepared for Operable Units No. 1 (Sites 21, 24, and 78) and No. 5 (Site 2). Both RODs are proposing to not remediate shallow groundwater which contains elevated levels of total metals above State groundwater standards (i.e., North Carolina Water Quality Standards) and/or Federal drinking water standards (i.e., Maximum Contaminant Levels). Specifically, remediation of shallow groundwater due to elevated total metals is not cost effective, or practical, due to the following: (1) the shallow aquifer is not used for potable supply; (2) the source of metals in groundwater cannot be correlated with soil data or previous disposal practices; (3) the extent of shallow groundwater contamination (based on total metals analysis) is widespread and in many cases undefinable, since there are no apparent contaminant plumes or patterns associated with the metals; and (4) deep groundwater, which is the source of potable water, is not significantly contaminated with metals above the standards.

2.0 STUDY OBJECTIVES

The DON/Marine Corps initiated a study on inorganics in groundwater throughout MCB Camp Lejeune to assess whether total metals in groundwater are related to disposal practices or to other factors. The overall goal of this study is to provide information that would be used in consideration of not remediating shallow groundwater at Operable Units No. 1 and No. 5, and possibly other operable units where total metals are elevated without cause. The following study objectives were identified:

- (1) Determine whether the elevated total metals detected in the shallow aquifer are related to past disposal practices, well construction factors, sampling techniques, or suspended particulates in the samples;
- (2) Determine whether total metals in shallow groundwater are elevated throughout the region or MCB Camp Lejeune;
- (3) Determine whether there is a correlation between elevated total metals in groundwater and metals in soil; and

- (4) Determine whether the concentrations of total metals (i.e., low versus high) is related to shallow and deep aquifer characteristics.

3.0 SCOPE OF WORK

Groundwater and soil data from a total of 21 sites were compiled as part of the overall study. Three of the 21 sites are located outside the boundary of the base. These sites include the ABC Cleaners Superfund Site, located along Route 24 in Jacksonville, and two sites located along Highway 17 (Off-site Properties No. 1 and No. 2). The two sites along Route 17 were investigated by the DON/Marine Corps as part of a real estate survey. The other 18 sites are located throughout various portions of MCB Camp Lejeune (see Figure 1).

Information from studies conducted by Baker and other consultants were obtained to evaluate metal concentrations in groundwater. The study focused on 14 metals of potential concern to human health and the environment. Some of the information was collected under the IR Program whereas other information was obtained during other investigations (e.g., ABC Cleaners RI/FS). The following data tables were then prepared to determine why total metals are generally elevated in shallow groundwater.

- Table 1 - Total Metal Concentrations in Shallow Groundwater by Site
- Table 2 - Summary of Repeat Sampling of Shallow Wells (Sites 2 and 78)
- Table 3 - Dissolved Metal Concentrations in Shallow Groundwater by Site
- Table 4 - Summary of Total Metal Concentrations in Upgradient Wells
- Table 5 - Comparison of Subsurface Metal Concentrations in Uncontaminated and Contaminated Wells
- Table 6 - Total Metal Concentrations in Deep Groundwater by Site
- Table 7 - Summary of Field Parameters in Shallow Monitoring Wells, Deep Monitoring Wells, and Supply Wells

The tables are presented at the end of this report.

4.0 DATA ANALYSIS

The following discussion represents an analysis of the information contained in each of the previously mentioned tables.

Table 1 (Total Metal Concentrations in Shallow Groundwater)

All of the sites had at least one (and in most cases several) metal which exceeded either State water quality standards or Federal drinking water standards. The most frequently detected metals included chromium, lead, and manganese, which were detected at almost every site above drinking water standards. Other frequently detected metals which exceeded drinking water standards included arsenic, beryllium, cadmium, and nickel.

An analysis of the data from Table 1 indicates that elevated total metals are present in shallow groundwater at every site, including the three sites which are located off base. The two sites which did not exhibit significant contamination include the ABC Cleaners site (only chromium exceeded the standards) and Site 48 (only manganese exceeded the standards).

Total metals detected in shallow groundwater at Site 2 exceeded State and/or Federal standards in seven of the 11 shallow monitoring wells. Manganese was the most frequently detected metal (7/11). Lead (3/11), chromium (2/11), and cadmium (1/11) were also detected above the standards, but less frequently (see Figure 2).

With the exception of Wells 78GW03 and 78GW19, total metals were detected at Site 78 (Hadnot Point Industrial Area) above Federal MCLs or NCWQS in every shallow well (see Figure 3). The extent of elevated total metals in groundwater is widespread, encompassing approximately one square mile (or approximately 660 acres) in total area. The distribution and concentration of total metals in shallow groundwater makes it virtually impossible to identify or illustrate contaminant plumes (see Figure 3).

An analysis of the total metals results indicates the following pattern. Samples exhibiting elevated levels of lead, chromium, or other contaminants of concern, also exhibited elevated levels of other metals such as aluminum, antimony, iron, and zinc. Samples which did not exhibit elevated levels of lead, chromium, or manganese also did not exhibit elevated levels of other metals. This pattern indicates that the elevated total metals are not limited to one or

two contaminants, which would be the case if a lead or chromium plume in the groundwater truly existed. In other words, if a site is impacted by a particular metal due to disposal activities (say chromium for example), then other metals such as aluminum, lead, or zinc should not be consistently elevated as in the case of samples collected from the shallow aquifer at MCB Camp Lejeune. This point is depicted in the data summary tables provided in Appendix A for Sites 2 and 78. These tables were taken from the Remedial Investigation Reports for Operable Units No. 1 and No. 5. As an example, note that sample numbers 78-MW08, 78-MW10, 78-MW11, and 78-MW12 all had elevated levels of total metals when compared to samples 78-MW09-2 and 78-MW09-3. It is clear that most of the metal concentrations in a particular sample follow a consistent pattern throughout.

Table 2 (Comparison of Repeat Sampling of Shallow Wells)

Five wells from Sites 2 and 78 were randomly chosen to evaluate total metals concentrations between sampling rounds. The comparison was limited to only chromium, lead, and manganese since these contaminants were frequently detected throughout MCB Camp Lejeune. In several cases, metal concentrations were significantly different between the sampling rounds. If the shallow aquifer was impacted due to former disposal activities, a contaminant plume would be present and concentrations would not significantly deviate. The deviation in metal concentrations may indicate that sampling results are biased due to suspended particulates in the samples.

Table 3 (Dissolved Metal Concentration in Shallow Groundwater by Site)

The data base for Table 3 was limited to 12 sites since many of the previous investigations (i.e., prior to Navy CLEAN) did not analyze for dissolved metals. Nevertheless, an analysis of the 12 sites revealed that elevated levels of dissolved metals in groundwater is limited. Manganese was the most frequently detected metal above drinking water standards (10 of 12 sites exhibited elevated levels). Lead was detected at only one site (Site 21) above drinking water standards. Chromium was also detected at only one site (Site 78) above drinking water standards. No other metal was detected above the standards.

Literature searches have indicated that manganese is a naturally occurring metal in North Carolina. Therefore, the presence of manganese may not be attributable to site-related activities (Greenhorne & O'Mara, 1992).

An analysis of the data from Table 3 clearly shows a significant reduction in metal concentrations when compared to Table 1 (total metals in shallow groundwater). One possible reason for this reduction is that suspended solids or particles are not being introduced into the analysis of the sample due to filtering. A second possibility is that the metals are not significantly present in a dissolved state in shallow groundwater due to the species of metals under site conditions. It should be noted that calcium and sodium did not exhibit such a pattern since the salts of these metals are more soluble in water. For example, the concentrations of total calcium and total sodium versus dissolved calcium and dissolved sodium are similar and are not affected by the removal of the particulates during filtering. The fact that these salts do not exhibit the pattern that the other metals show supports the possibility that total metal concentrations are influenced by particulates in the sample.

Table 4 (Total Metals in Upgradient Shallow Wells)

The data base for Table 4 consists of groundwater results from 14 upgradient shallow monitoring wells (i.e., one well per site). These wells were installed to determine baseline groundwater quality to which on-site groundwater conditions could be compared. In some cases, the upgradient wells were located in areas where other base activities may have influenced groundwater quality.

The analysis of this data shows that manganese was the most frequently detected metal above Federal or State standards in upgradient shallow wells. Manganese was detected in 7 of the 14 upgradient wells above drinking water standards. Chromium and lead were also frequently detected above drinking water standards in upgradient (background) wells. These contaminants were detected in 6 of the 14 upgradient wells. At Site 2, samples collected from an upgradient well (2GW9) exhibited elevated levels of chromium (83 μ /l), lead (27.2 μ /l) and manganese (747 μ /l). At Site 78, samples collected from upgradient wells 96W4 and 78GW26 did not exhibit elevated levels of total metals. The concentration range for metals detected above NC WQS and/of Federal MCLs in upgradient wells is provided below:

- beryllium (ND-46.5 μ /l)
- cadmium (ND-10 μ /l)
- chromium (ND-198 μ /l)
- lead (ND-78.8 μ /l)
- manganese (ND-747 μ /l)
- mercury (ND-1.6J μ /l)

Based on the above range representing upgradient wells, none of the on-site wells at Site 2 exhibited total metals above the maximum background concentrations. However, at Site 78, lead and chromium were detected above the maximum background in several on-site wells.

An analysis of the data from Table 4 indicates that shallow groundwater upgradient of some sites contains total metals above drinking water standards. A comparison of Table 4 data against Table 1 data indicates that shallow groundwater samples from upgradient wells are less contaminated than samples collected from on-site monitoring wells. However, it should be noted that the data base for Table 4 consists of only 14 wells whereas the data base for Table 1 consists of over 130 wells. Therefore, to assume that upgradient groundwater quality is better than on-site groundwater quality may not be justified due to the different data bases.

Table 5 (Comparison of Subsurface Metal Concentrations in Uncontaminated and Contaminated Wells)

The purpose of this table is to determine whether metal concentrations in soils correlate with the elevated levels of metals in shallow groundwater.

To evaluate this, metals in subsurface soils, representing an area of groundwater contamination, were compared to metals in subsurface soil in areas which did not exhibit groundwater contamination. If the elevated total metals in shallow groundwater are present due to former disposal activities, subsurface metals in soil representing an area of groundwater contamination would be expected to be elevated or higher than metals in subsurface soil representing a non-contaminated area. This evaluation assumes that the well exhibiting elevated total metals is within a source area and that the soil sample is representative of soil impacted by metal contamination.

As shown on Table 5, there is no clear pattern or correlation which indicates that elevated total metals are due to soil contamination. Note that in many cases, the concentration of metals which represent "non-contaminated" areas are greater than the metals which represent "contaminated" areas. Also note that the metals in subsurface soil are within or close to background subsurface metal concentrations. Therefore, this supports the possibility that in many cases at MCB Camp Lejeune, the elevated total metals in shallow groundwater cannot be attributable to a source or to past disposal practices.

Table 6 (Total Metals in Deep Monitoring Wells)

Table 6 presents total metal concentrations in deep groundwater for each site. The data base is limited to only 8 sites. Metal concentrations in supply wells were also included for comparison purposes.

As shown on Table 6, total metals in deep groundwater are below drinking water standards with a few exceptions. Arsenic and cadmium were detected above the standards in one deep monitoring well at Site 78 (see Figure 4). Manganese was detected in deep groundwater at three sites and a few of the supply wells. Lead was detected in one supply well at 16 μl , which is slightly above the drinking water standard of 15 μl .

Elevated total metals are not widespread in deep groundwater for two possible reasons. First, most metals are not very mobile in the environment. Second, deep groundwater samples may not have significant amounts of suspended particulates due to different geologic conditions. Soils in the deeper aquifer are more compacted and consist primarily of calcareous sands, clays, and limestone fragments. Soils in the shallow aquifer are loosely compacted and consist primarily of fine-grained sands, silts, and clays. This classification may support the possibility that suspended solids are collected during sampling, thereby influencing the analysis for total metals.

Table 7 (Summary of Field Parameters in Shallow, Deep, and Supply Wells)

Table 7 provides a range of pH and specific conductivity values representative of shallow and deep groundwater. In general, lower pH values were noted more often in shallow wells than in deep wells (including the supply wells). This condition may influence the leachability and speciation of metals in groundwater.

Deep groundwater usually exhibited higher specific conductivity values. High specific conductivity values are representative of high dissolved conditions. The fact that deep groundwater generally exhibited higher specific conductivity values indicates that most of the metals, if present, are in a dissolved state. The high specific conductivity values could also indicate less suspended particulates due to the geologic conditions of the deep aquifer. The lower specific conductivity values observed in shallow wells indicates that the metals in the shallow aquifer are not in a dissolved state. This also supports the possibility that suspended particulates in the shallow aquifer are influencing the analysis of total metals.

5.0 ANALYSIS OF THE STUDY OBJECTIVES

Each of the objectives identified for this study are analyzed below based on the information collected.

Objective No. 1 (Determine whether the elevated total metals in the shallow aquifer are related to past disposal practices, well construction factors, sampling techniques, or suspended particulates in the samples)

Based on the analysis of information provided in Tables 1 through 7 and Appendix A, it appears that suspended particulates in groundwater samples could influence the concentration of total metals in groundwater. Well construction factors and sampling techniques are probably not a significant factor since the data base is representative of data obtained by Baker, ESE (Site 28 and 30), Roy F. Weston (ABC Cleaners), and Halliburton NUS (Site 7). No particular pattern was noted between sites which Baker obtained the samples versus sites in which other consultants obtained the data. Sampling methods were also considered. For Sites 63 and 65 for example, samples were collected with a bailer. At Sites 2 and 78, samples were collected with a low flow pump. All four sites exhibited elevated levels of total metals in groundwater samples. In addition, due to the fact that deep groundwater quality is not significantly impacted with metals indicates that well construction or sampling techniques are probably not factors related to elevated total metals in groundwater.

With respect to past disposal practices, Table 5 clearly shows that soil concentrations do not correlate with elevated total metals in groundwater. Based on this analysis, and on many of the sites previously investigated, the source of total metals in groundwater cannot be attributable to soil contamination or disposal practices in many cases. This is based on both the history of the site as well as the analytical soil results. In some cases, total metals were detected at elevated levels even when the site history did not correlate with the contaminants found. For example, Sites 2 and 21 have a history of pesticide storage and handling, and there are no known disposal areas (i.e., buried debris) within the site boundary. Nevertheless, both of these sites exhibited several metals above drinking water standards that would not be expected to be present at high concentrations based on the historical use of the site. These metals included lead, chromium, beryllium, cadmium, and manganese.

Objective No. 2 (Determine whether total metals in shallow groundwater are elevated throughout the region or MCB Camp Lejeune)

Based on groundwater data obtained from both upgradient wells and off base wells, total metals were detected above drinking water standards in shallow groundwater in areas that would not be influenced by former disposal activities at the sites. Given that some of the upgradient wells are contaminated, it is apparent that total metals in shallow groundwater are elevated in certain areas of the base outside of the influence of site-related disposal activities. However, it is unknown whether the shallow aquifer upgradient of the sites is contaminated due to other base-related activities or whether the levels in groundwater samples are also elevated due to the influence of suspended fines in the samples.

Objective No. 3 (Determine whether there is a correlation between elevated total metals in groundwater and metals in soil)

An evaluation of the data presented in Table 5 shows that metals in soil samples collected in areas of groundwater contamination are not elevated when compared to metals in soil samples collected in areas that did not exhibit groundwater contamination. This supports the possibility that in many cases, elevated levels of total metals in shallow groundwater are not related to the disposal history at the site. As previously mentioned, sites which did not exhibit soil contamination (when compared to background soil levels) or did not have a history of disposal indicative of metals contamination still exhibited elevated levels of total metals in groundwater. Since there is no apparent correlation between metals in soil and total metals in groundwater, then the possibility exists that the elevated total metals in groundwater are biased high due to suspended particulates.

Objective No. 4 (Determine whether the concentrations of total metals in groundwater is related to shallow and deep aquifer characteristics)

There is some evidence that the geologic conditions of the shallow and deep aquifers influence the amount of total metals detected in groundwater samples. The fact that the deep aquifer generally exhibited higher specific conductivity values indicates that there is more dissolved constituents in the deep aquifer when compared to the shallow aquifer. This was evident when comparing Table 1 (total metals in shallow groundwater) to Table 6 (total metals in deep groundwater). Table 6 did not indicate significant levels of total metals in deep groundwater throughout MCB Camp Lejeune.

The geologic conditions of the shallow aquifer would tend to result in samples that may contain suspended particulates. The suspended particulates could influence the total metals concentrations in the samples.

6.0 CONCLUSIONS

1. Elevated levels of total metals in the shallow aquifer are probably influenced to some degree by the geologic conditions of the site.
2. There is no correlation between metal levels in soil and total metals in groundwater. Therefore, elevated total metals in groundwater cannot be attributable to soil contamination of past disposal practices.
3. Elevated levels of total metals in the shallow aquifer may be biased high due to suspended particulates in the samples.
4. Dissolved metals in groundwater were generally below Federal MCLs and NC WQS and therefore, do not present a significant problem at MCB Camp Lejeune.
5. Total and dissolved metal concentrations in the Castle Hayne aquifer were generally below drinking water standards and therefore, do not present a significant problem at MCB Camp Lejeune.
6. The presence of manganese in shallow and deep groundwater may be due to naturally occurring geologic conditions.

7.0 RECOMMENDATIONS

- 1. Remediation of total metals in the shallow aquifer at Operable Units 1 and 5 is not recommended based on the following:**
 - **Elevated metals in groundwater at both operable units does not appear to be related to soil contamination or past disposal practices;**
 - **The distribution of total metals in groundwater is not characteristic of a plume that would be present due to a source of contamination;**
 - **Remediation of total metals would not be practical from an engineering or cost standpoint; and**
 - **Currently, there is no human or environmental exposure to shallow groundwater.**

- 2. Additional background wells should be installed at all sites in order to provide a baseline for comparing on-site groundwater quality.**

NOTES:
 Shaded area indicates inorganic which exceeded a MCL and/or NCWQS in groundwater sample.
 J - Value is estimated.
 JB - Value is estimated below the CRDL, but greater than the IDL.
 NA - No available wells to compare OR compound was not analyzed.
 ND - Not detected.
 NCWQS - North Carolina Water Quality Standard
 MCL - Maximum Contaminant Level
 (1) - Secondary MCL

GROUNDWATER INGESTION EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MOB CAMP LEJEUNE, NORTH CAROLINA
 FUTURE RESIDENTIAL ADULT

Intake from drinking water is calculated as follows:

$$\text{Intake (mg/kg-day)} = C * IRw * EF * ED / BW * AT \text{ or } ATnc * DY$$

$$\text{Risk} = \text{Intake} * CSF \text{ or } RfD$$

Where:	INPUTS
C = contaminant concentration in water (mg/l)	Specific
IRw = daily water ingestion rate (L/Day)	2
EF = exposure frequency (days/yr)	365
ED = exposure duration (yr)	30
BW = body weight (kg)	70
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	30
DY = days per year (day/year)	365
CSF = cancer slope factor (mg/kg-day) ⁻¹	Specific
RfD = reference dose (mg/kg-day)	Specific

Note: Inputs are scenario and site specific

 File Name: GWI.WQ2

**EXAMPLE DERMAL CONTACT WITH GROUNDWATER CALCULATIONS
OPERABLE UNIT NO. 11 (SITE 80)
CONTRACT TASK ORDER 0274**

Purpose: Estimate intake/risk from dermal contact with groundwater

$$\text{Intake (mg/kg}\cdot\text{day)} = \frac{C \times SA \times PC \times ET \times EF \times ED \times CF}{BW \times AT}$$

Where:	C	=	Contaminant concentration in groundwater (mg/L)
	SA	=	Exposed skin surface available for contact (cm ²)
	PC	=	Permeability constant (cm/hr)
	ET	=	Exposure time (hr/day)
	EF	=	Exposure frequency (days/year)
	ED	=	Exposure duration (years)
	CF	=	Conversion factor (1 L/1,000 cm ³)
	BW	=	Body weight (kg)
	AT _c	=	Averaging time carcinogen (days)
	AT _{nc}	=	Averaging time noncarcinogen (days)

Risks:

$$\begin{aligned} \text{Carcinogens} &= \text{Intake (mg/kg}\cdot\text{day)} \times \text{CSF (mg/kg}\cdot\text{day)}^{-1} \\ \text{Noncarcinogens} &= \text{Intake (mg/kg}\cdot\text{day)}/\text{RfD (mg/kg}\cdot\text{day)} \end{aligned}$$

Example Carcinogen: Bis(2-ethylhexyl)phthalate

$$\begin{aligned} \text{Intake (mg/kg}\cdot\text{day)} &= \frac{0.005 \text{ mg/L} \times 23,000 \text{ cm}^2 \times 1.50\text{E-}03 \text{ cm/hr} \times 0.25 \text{ hr/day} \times 350 \text{ days/yr} \times 30 \text{ yrs} \times 1 \text{ L/1,000 cm}^3}{70 \text{ kg} \times 25,550 \text{ days}} \\ &= 2.53\text{E-}07 \end{aligned}$$

$$\text{Risk} = 2.53\text{E-}07 \text{ mg/kg}\cdot\text{day} \times 1.40\text{E-}02 \text{ mg/kg}\cdot\text{day}^{-1} = 3.54\text{E-}09$$

Example Noncarcinogen: Bis(2-ethylhexyl)phthalate

$$\begin{aligned} \text{Intake (mg/kg}\cdot\text{day)} &= \frac{0.005 \text{ mg/L} \times 23,000 \text{ cm}^2/\text{hr} \times 1.50\text{E-}03 \text{ cm/hr} \times 0.25 \text{ hr/day} \times 350 \text{ days/yr} \times 30 \text{ yrs} \times 1 \text{ L/1,000 cm}^3}{70 \text{ kg} \times 10,950 \text{ days}} \\ &= 5.91\text{E-}07 \end{aligned}$$

$$\text{Risk} = \frac{5.91\text{E-}07 \text{ mg/kg}\cdot\text{day}}{2.00\text{E-}02 \text{ mg/kg}\cdot\text{day}} = 0.00003$$

Re: Site 80 Future Residential Adult

GROUNDWATER DERMAL CONTACT EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 83)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NORTH CAROLINA
 FUTURE RESIDENTIAL CHILD

Dermal Contact from groundwater is calculated as follows:

$$\text{Intake (mg/kg-day)} = \text{CW} * \text{SA} * \text{PC} * \text{ET} * \text{EF} * \text{ED} * \text{CF/BW} * \text{ATc or ATnc} * \text{DY}$$

$$\text{Risk} = \text{Intake} * \text{CSF or RfD}$$

Where:	INPUTS
CW = contaminant concentration in water (mg/l)	Specific
SA = skin surface available for contact (cm ²)	10000
PC = contaminant specific dermal permeability (cm/hr)	Specific
ET = exposure time (hours/day)	0.25
EF = exposure frequency (days/yr)	350
ED = exposure duration (years)	6
CF = volumetric conversion factor for water (1liter/1000 cm ³)	0.001
BW = body weight (kg)	15
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	6
DY = days per year (days)	365

Note: Inputs are site and scenario specific

GROUNDWATER DERMAL CONTACT EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NORTH CAROLINA
 FUTURE RESIDENTIAL ADULT

Dermal Contact from groundwater is calculated as follows:

$$\text{Intake (mg/kg-day)} = \text{CW} * \text{SA} * \text{PC} * \text{ET} * \text{EF} * \text{ED} * \text{CF/BW} * \text{ATc or ATnc} * \text{DY}$$

$$\text{Risk} = \text{Intake} * \text{CSF or RfD}$$

Where:	INPUTS
CW = contaminant concentration in water (mg/l)	Specific
SA = skin surface available for contact (cm ²)	23000
PC = contaminant specific dermal permeability (cm/hr)	Specific
ET = exposure time (hours/day)	0.25
EF = exposure frequency (days/yr)	350
ED = exposure duration (years)	30
CF = volumetric conversion factor for water (1liter/1000 cm ³)	0.001
BW = body weight (kg)	70
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	30
DY = days per year (days)	365

Note: Inputs are site and scenario specific

APPENDIX M
CDI CALCULATIONS AND SPREADSHEETS

**EXAMPLE SOIL INGESTION CALCULATIONS
OPERABLE UNIT NO. 11 (SITE 80)
CONTRACT TASK ORDER 0274**

Purpose: Estimate intake/risk from ingestion of soil

$$\text{Intake (mg/kg-day)} = \frac{C \times CF \times EF \times ED \times IR}{BW \times AT}$$

Where:

C	=	Contaminant concentration in soil (mg/kg)
CF	=	Conversion factor (kg/mg)
EF	=	Exposure frequency (days/year)
ED	=	Exposure duration (years)
IR	=	Ingestion rate (mg/day)
BW	=	Body weight (kg)
AT _c	=	Averaging time carcinogen (days)
AT _{nc}	=	Averaging time noncarcinogen (days)

Risks:

$$\begin{aligned} \text{Carcinogens} &= \text{Intake (mg/kg-day)} \times \text{CSF (mg/kg-day)}^{-1} \\ \text{Noncarcinogens} &= \text{Intake (mg/kg-day)} / \text{RfD (mg/kg-day)} \end{aligned}$$

Example Carcinogen: Arsenic

$$\begin{aligned} \text{Intake (mg/kg-day)} &= \frac{14.2 \text{ mg/kg} \times 100 \text{ mg/day} \times 350 \text{ days/yr} \times 24 \text{ yrs} \times 1.0\text{E-}6 \text{ kg/mg}}{70 \text{ kg} \times 25,550 \text{ days}} \\ &= 6.65\text{E-}06 \end{aligned}$$

$$\text{Risk} = 6.65\text{E-}06 \text{ mg/kg-day} \times 1.75\text{E+}00 \text{ mg/kg-day}^{-1} = 1.16\text{E-}05$$

Example Noncarcinogen: Arsenic

$$\begin{aligned} \text{Intake (mg/kg-day)} &= \frac{14.2 \text{ mg/kg} \times 100 \text{ mg/day} \times 350 \text{ days/yr} \times 24 \text{ yrs} \times 1.0\text{E-}6 \text{ kg/mg}}{70 \text{ kg} \times 8,760 \text{ days}} \\ &= 1.94\text{E-}05 \end{aligned}$$

$$\text{Risk} = \frac{1.94\text{E-}05 \text{ mg/kg-day}}{3.00\text{E-}04 \text{ mg/kg-day}} = 0.065$$

Re: Site 80 Future Residential Adult

SURFACE SOIL INGESTION EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NORTH CAROLINA
 FUTURE RESIDENTIAL CHILD

Intake from ingestion of soil is calculated as follows:

$$\text{Intake (mg/kg-day)} = C * CF * EF * ED * IR/BW * ATc \text{ or } ATnc * DY$$

$$\text{Risk} = \text{Intake} * CSF \text{ or } RfD$$

Where:	INPUTS
C = contaminant concentration in soil (mg/kg)	Specific
CF = conversion for kg to mg	1E-06
EF = exposure frequency (days/yr)	350
ED = exposure duration (yr)	6
IR = soil ingestion rate (mg/day)	200
BW = body weight (kg)	15
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	6
DY = days per year (days/year)	365
CSF = cancer slope factor (mg/kg-day) ⁻¹	Specific
RfD = reference dose (mg/kg-day)	Specific

Note: Inputs are scenario and site specific

**EXAMPLE DERMAL CONTACT WITH SOIL CALCULATIONS
OPERABLE UNIT NO. 11 (SITE 80)
CONTRACT TASK ORDER 0274**

Purpose: Estimate intake/risk from dermal contact with soil

$$\text{Intake (mg/kg-day)} = \frac{C \times CF \times SA \times AF \times Abs \times EF \times ED}{BW \times AT}$$

Where:

C	=	Contaminant concentration in soil (mg/kg)
CF	=	Conversion factor (kg/mg)
SA	=	Surface available for contact (cm ² /event)
AF	=	Soil to skin adherence factor (mg/cm ²)
Abs	=	Fraction absorbed (percent)
EF	=	Exposure frequency (days/year)
ED	=	Exposure duration (years)
BW	=	Body weight (kg)
AT _c	=	Averaging time carcinogen (days)
AT _{nc}	=	Averaging time noncarcinogen (days)

Risks:

$$\begin{aligned} \text{Carcinogens} &= \text{Intake (mg/kg-day)} \times \text{CSF (mg/kg-day)}^{-1} \\ \text{Noncarcinogens} &= \text{Intake (mg/kg-day)} / \text{RfD (mg/kg-day)} \end{aligned}$$

Example Carcinogen: Dieldrin

$$\begin{aligned} \text{Intake (mg/kg-day)} &= \frac{2.4244 \text{ mg/kg} \times 1.0\text{E-}06 \text{ kg/mg} \times 5,800 \text{ cm}^2/\text{event} \times 1\% \times 1 \text{ mg/cm}^2 \times 350 \text{ event/yr} \times 24}{70 \text{ kg} \times 25,550 \text{ days}} \\ &= 6.60\text{E-}07 \end{aligned}$$

$$\text{Risk} = 6.60\text{E-}07 \text{ mg/kg-day} \times 1.60\text{E+}01 \text{ mg/kg-day}^{-1} = 1.06\text{E-}05$$

Example Noncarcinogen: Dieldrin

$$\begin{aligned} \text{Intake (mg/kg-day)} &= \frac{2.4244 \text{ mg/kg} \times 1.0\text{E-}06 \text{ kg/mg} \times 5,800 \text{ cm}^2/\text{event} \times 1 \text{ mg/cm}^2 \times 1\% \times 350 \text{ event/yr} \times 24}{70 \text{ kg} \times 8,760 \text{ days}} \\ &= 1.93\text{E-}06 \end{aligned}$$

$$\text{Risk} = \frac{1.93\text{E-}06 \text{ mg/kg-day}}{5.00\text{E-}05 \text{ mg/kg-day}} = 0.039$$

SURFACE SOIL DERMAL CONTACT EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NORTH CAROLINA
 ADULT CIVILIAN BASE PERSONNEL

Dermal contact with soil is calculated as follows:

$$\text{Intake (mg/kg-day)} = C * CF * SA * AF * Abs * EF * ED/BW * ATc \text{ or } ATnc * DY$$

$$\text{Risk} = \text{Intake} * CSF \text{ or } RfD$$

Where:	INPUTS
C = contaminant concentration in soil (mg/kg)	Specific
CF = conversion factor (kg/mg)	1E-06
SA = exposed skin surface area (cm ²)	4300
AF = soil to skin adherence factor (mg/cm ²)	1
Abs = fraction absorbed (unitless)	Specific
EF = exposure frequency (events/yr)	250
ED = exposure duration (years)	25
BW = body weight (kg)	70
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	25
DY = day per year (day/yr)	365
CSF = cancer slope factor (mg/kg-day) ⁻¹	Specific
RfD = reference dose (mg/kg-day)	Specific

Note: Inputs are scenario and site specific

EXAMPLE INHALATION OF PARTICULATES CALCULATIONS
OPERABLE UNIT NO. 11 (SITE 80)
CONTRACT TASK ORDER 0274

Purpose: Estimate intake/risk from the inhalation of soil particulates

$$\text{Intake (mg/kg}\cdot\text{day)} = \frac{C \times IR \times EF \times ED \times 1/PEF}{BW \times AT}$$

Where:	C	=	Contaminant concentration in soil (mg/kg)
	IR	=	Inhalation rate (m ³ /day)
	EF	=	Exposure frequency (days/year)
	ED	=	Exposure duration (years)
	PEF	=	Particulate Emission Factor (m ³ /kg)
	BW	=	Body weight (kg)
	AT _c	=	Averaging time carcinogen (days)
	AT _{nc}	=	Averaging time noncarcinogen (days)

Risks:

$$\begin{aligned} \text{Carcinogens} &= \text{Intake (mg/kg}\cdot\text{day)} \times \text{CSF (mg/kg}\cdot\text{day)}^{-1} \\ \text{Noncarcinogens} &= \text{Intake (mg/kg}\cdot\text{day)} / \text{RfD (mg/kg}\cdot\text{day)} \end{aligned}$$

Example Carcinogen: Beryllium

$$\begin{aligned} \text{Intake (mg/kg}\cdot\text{day)} &= \frac{0.1 \text{ mg/kg} \times 20 \text{ m}^3/\text{day} \times 350 \text{ days/yr} \times 24 \text{ yrs} \times 1/4.6E+09 \text{ m}^3/\text{kg}}{70 \text{ kg} \times 25,550 \text{ days}} \\ &= 2.014E-12 \end{aligned}$$

$$\text{Risk} = 2.01E-12 \text{ mg/kg}\cdot\text{day} \times 8.40E+00 \text{ mg/kg}\cdot\text{day}^{-1} = 1.69E-11$$

Example Noncarcinogen: Manganese

$$\begin{aligned} \text{Intake (mg/kg}\cdot\text{day)} &= \frac{43.6 \text{ mg/kg} \times 20 \text{ m}^3/\text{day} \times 350 \text{ days/yr} \times 24 \text{ yrs} \times 1/4.6E+09 \text{ m}^3/\text{kg}}{70 \text{ kg} \times 8,760 \text{ days}} \\ &= 2.58E-09 \end{aligned}$$

$$\text{Risk} = 2.58E-09 \text{ mg/kg}\cdot\text{day} \times 1.43E-05 \text{ mg/kg}\cdot\text{day}^{-1} = 3.7E-14$$

PARTICULATE INHALATION EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NDRTH CAROLINA
 FUTURE RESIDENTIAL CHILD

Intake from the inhalation of particulates is calculated as follows:

$$\text{Intake (mg/kg-day)} = (C * EF * ED * IR * 1/PEF)/(BW * ATc \text{ or } ATnc * DY)$$

$$\text{Risk} = \text{Intake} * \text{CSF} \text{ or } /RfD$$

Where:	INPUTS
C = contaminant concentration in soil (mg/kg)	Specific
CSF = carcinogenic slope factor	Specific
RfD = reference dose for noncarcinogen	Specific
IR = inhalation rate (m3)	12
EF = exposure frequency (days)	350
ED = exposure duration (years)	6
BW = body weight (kg)	15
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	6

**EXAMPLE GROUNDWATER INGESTION CALCULATIONS
OPERABLE UNIT NO. 11 (SITE 80)
CONTRACT TASK ORDER 0274**

Purpose: Estimate intake/risk from ingestion of groundwater

$$\text{Intake (mg/kg-day)} = \frac{C \times IR \times EF \times ED}{BW \times AT}$$

Where:

C	=	Contaminant concentration in groundwater (mg/L)
IR	=	Daily intake ingestion rate (L/day)
EF	=	Exposure frequency (days/year)
ED	=	Exposure duration (years)
BW	=	Body weight (kg)
AT _c	=	Averaging time carcinogen (days)
AT _{nc}	=	Averaging time noncarcinogen (days)

Risks:

$$\text{Carcinogens} = \text{Intake (mg/kg-day)} \times \text{CSF (mg/kg-day)}^{-1}$$

$$\text{Noncarcinogens} = \text{Intake (mg/kg-day)} / \text{RfD (mg/kg-day)}$$

Example Carcinogen: 4,4'-DDT

$$\text{Intake (mg/kg-day)} = \frac{0.0002 \text{ mg/L} \times 2 \text{ L/day} \times 350 \text{ days/yr} \times 30 \text{ yrs}}{70 \text{ kg} \times 25,550 \text{ days}}$$

$$= 2.30\text{E-}06$$

$$\text{Risk} = 2.30\text{E-}06 \text{ mg/kg-day} \times 0.34 \text{ mg/kg-day}^{-1} = 8.0\text{E-}07$$

Example Noncarcinogen: 4,4'-DDT

$$\text{Intake (mg/kg-day)} = \frac{0.0002 \text{ mg/L} \times 2 \text{ L/day} \times 350 \text{ days/yr} \times 30 \text{ yrs}}{70 \text{ kg} \times 10,950 \text{ days}}$$

$$= 5.50\text{E-}06$$

$$\text{Risk} = \frac{5.50\text{E-}06 \text{ mg/kg-day}}{5.00\text{E-}04 \text{ mg/kg-day}} = 0.01$$

**EXAMPLE DERMAL CONTACT WITH GROUNDWATER CALCULATIONS
OPERABLE UNIT NO. 11 (SITE 80)
CONTRACT TASK ORDER 0274**

Purpose: Estimate intake/risk from dermal contact with groundwater

$$Intake (mg/kg\cdot day) = \frac{C \times SA \times PC \times ET \times EF \times ED \times CF}{BW \times AT}$$

Where:

C	=	Contaminant concentration in groundwater (mg/L)
SA	=	Exposed skin surface available for contact (cm ²)
PC	=	Permeability constant (cm/hr)
ET	=	Exposure time (hr/day)
EF	=	Exposure frequency (days/year)
ED	=	Exposure duration (years)
CF	=	Conversion factor (1 L/1,000 cm ³)
BW	=	Body weight (kg)
AT _c	=	Averaging time carcinogen (days)
AT _{nc}	=	Averaging time noncarcinogen (days)

Risks:

$$\begin{aligned} \text{Carcinogens} &= \text{Intake (mg/kg}\cdot\text{day)} \times \text{CSF (mg/kg}\cdot\text{day)}^{-1} \\ \text{Noncarcinogens} &= \text{Intake (mg/kg}\cdot\text{day)} / \text{RfD (mg/kg}\cdot\text{day)} \end{aligned}$$

Example Carcinogen: Bis(2-ethylhexyl)phthalate

$$\begin{aligned} Intake (mg/kg\cdot day) &= \frac{0.005 \text{ mg/L} \times 23,000 \text{ cm}^2 \times 1.50\text{E-}03 \text{ cm/hr} \times 0.25 \text{ hr/day} \times 350 \text{ days/yr} \times 30 \text{ yrs} \times 1 \text{ L/1,000 cm}^3}{70 \text{ kg} \times 25,550 \text{ days}} \\ &= 2.53\text{E-}07 \end{aligned}$$

$$Risk = 2.53\text{E-}07 \text{ mg/kg}\cdot\text{day} \times 1.40\text{E-}02 \text{ mg/kg}\cdot\text{day}^{-1} = 3.54\text{E-}09$$

Example Noncarcinogen: Bis(2-ethylhexyl)phthalate

$$\begin{aligned} Intake (mg/kg\cdot day) &= \frac{0.005 \text{ mg/L} \times 23,000 \text{ cm}^2/\text{hr} \times 1.50\text{E-}03 \text{ cm/hr} \times 0.25 \text{ hr/day} \times 350 \text{ days/yr} \times 30 \text{ yrs} \times 1 \text{ L/1,000 cm}^3}{70 \text{ kg} \times 10,950 \text{ days}} \\ &= 5.91\text{E-}07 \end{aligned}$$

$$Risk = \frac{5.91\text{E-}07 \text{ mg/kg}\cdot\text{day}}{2.00\text{E-}02 \text{ mg/kg}\cdot\text{day}} = 0.00003$$

GROUNDWATER DERMAL CONTACT EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NORTH CAROLINA
 FUTURE RESIDENTIAL CHILD

Dermal Contact from groundwater is calculated as follows:

$$\text{Intake (mg/kg-day)} = \text{CW} * \text{SA} * \text{PC} * \text{ET} * \text{EF} * \text{ED} * \text{CF/BW} * \text{ATc or ATnc} * \text{DY}$$

$$\text{Risk} = \text{Intake} * \text{CSF or RfD}$$

Where:	INPUTS
CW = contaminant concentration in water (mg/l)	Specific
SA = skin surface available for contact (cm ²)	10000
PC = contaminant specific dermal permeability (cm/hr)	Specific
ET = exposure time (hours/day)	0.25
EF = exposure frequency (days/yr)	350
ED = exposure duration (years)	6
CF = volumetric conversion factor for water (1 liter/1000 cm ³)	0.001
BW = body weight (kg)	15
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	6
DY = days per year (days)	365

Note: Inputs are site and scenario specific

GROUNDWATER DERMAL CONTACT EXPOSURE ASSESSMENT
 OPERABLE UNIT NO. 11 (SITE 80)
 REMEDIAL INVESTIGATION CTO-0274
 MCB CAMP LEJEUNE, NORTH CAROLINA
 FUTURE RESIDENTIAL ADULT

Dermal Contact from groundwater is calculated as follows:

$$\text{Intake (mg/kg-day)} = \text{CW} * \text{SA} * \text{PC} * \text{ET} * \text{EF} * \text{ED} * \text{CF} / \text{BW} * \text{ATc or ATnc} * \text{DY}$$

$$\text{Risk} = \text{Intake} * \text{CSF or RfD}$$

Where:	INPUTS
CW = contaminant concentration in water (mg/l)	Specific
SA = skin surface available for contact (cm ²)	23000
PC = contaminant specific dermal permeability (cm/hr)	Specific
ET = exposure time (hours/day)	0.25
EF = exposure frequency (days/yr)	350
ED = exposure duration (years)	30
CF = volumetric conversion factor for water (1liter/1000 cm ³)	0.001
BW = body weight (kg)	70
ATc = averaging time for carcinogen (yr)	70
ATnc = averaging time for noncarcinogen (yr)	30
DY = days per year (days)	365

Note: Inputs are site and scenario specific

Contaminant(1)	Concentration Carcinogen (mg/l)	Surface Area (cm ²)	Dermal Permeability (cm/hr)	Exposure Time (hours/day)	Exposure Frequency (days/yr)	Exposure Duration (years)	Volumetric Conversion (L/m ³)	Body Weight (kg)	Averaging Carc Time (years)	Days per Year (days)	Carc Dose (mg/kg-day)	Slope Factor (mg/kg-day) ⁻¹	Carcinogenic Risk	Percent Carcinogenic Risk

Miscellaneous Notes:

ECOLOGICAL EVALUATION
FIELD DATA SHEET - TERRESTRIAL

Project Name: Habitat Evaluation

Location: MCB Camp Lejeune, Jacksonville, NC

Date: 12/6/94

Sampling Location: Golf Course ~~Site~~ Maintenance Area

Data Collected By: JSS CDC

Habitat Type: Ecotone between mixed Forest & Open Areas

Vegetation: _____

Trees:

Dominant Species:

- | | |
|----------|-----------|
| 1. _____ | 6. _____ |
| 2. _____ | 7. _____ |
| 3. _____ | 8. _____ |
| 4. _____ | 9. _____ |
| 5. _____ | 10. _____ |

Miscellaneous Notes:

APPENDIX O
ENDANGERED SPECIES SURVEY

Critical species list - Camp Lejeune endangered species and
special-interest communities survey

Principal Investigator: Richard LeBlond, 326-1440

List current as of 9-30-91.

Replaces list of 6-30-91.

"?" = Species names followed by a "?" are less than confidently identified. They are nonetheless caught in this biological safety net, the mesh size of which errs on the side of diversity. Until identification is confirmed (most of these are represented by a specimen), these site records should be regarded as tentative.

Species sites are listed chronologically under the species name; with the 1990 month and day of discovery listed first, followed by the site's sector site number, community type and UTM grid number. Sites documented prior to the start of the current survey are indicated by the parenthetical date of discovery following the site name (see Rhexia aristosa at FD-1). Prior sites not yet relocated during the current survey are indicated by "---" in the date column (see Rhynchospora tracyi at FD-1).

Status codes. Federal status is listed first, and separated from the state status by a comma; e.g., Rhexia aristosa FC2,T (Federal Candidate level 2, state Threatened). Species with state status only are indicated by a single code without comma; e.g., Rhynchospora tracyi SR (Significantly Rare).

FE = Federal Endangered

FT = Federal Threatened

FC1 = Federal Candidate level 1. At risk. Listing warranted but precluded by higher priorities.

FC2 = Federal Candidate level 2. Vulnerable. Listing warranted but precluded by higher priorities.

F3C = Federal Candidate level 3C. More abundant and/or less threatened than previously known.

E = State Endangered

T = State Threatened

SC = State Special Concern

C = State Candidate

SR = State Significantly Rare

W = State Watch List (W1)

W3 = " " " , undocumented state occurrence prior to
Lejeune site.

proposed = proposed for listing as State Candidate, Significantly Rare or Watch List based on current evidence

APPENDIX P
TERRESTRIAL REFERENCE VALUES AND CDI SPREADSHEETS

APPENDIX P.1
DERIVATION OF TERRESTRIAL REFERENCE VALUES
OPERABLE UNIT NO 11 (SITE 80)
REMEDIAL INVESTIGATION, CTO-0274
MCB, CAMP LEJEUNE, NORTH CAROLINA

For the bobwhite quail TRVs derived from the poultry MTLs, a consumption rate of 0.41 kg food/kg body weight was calculated based on an average poultry weighing 0.5 kg, and the following allometric model (Nagy, 1987):

$$CR (\text{birds}) = 0.648 (\text{bw})^{0.651}$$

Where:

CR (birds) = consumption rate for birds
(kg food/kg body weight-day)

bw = body weight for an average bird (0.5 kg)

The TRV for poultry then was adjusted to a TRV for a bobwhite quail to account for differences in the body size using the same equation that was used to adjust the cow to the deer. The body weight used for the bobwhite quail was 0.174 kg.

For the cottontail rabbit TRVs derived from the rabbit MTLs, a consumption rate of 0.081 was calculated using the following equation:

$$CR (\text{rabbit}) = FR/bw$$

Where:

CR (rabbit) = consumption rate for rabbits
(kg food/kg body weight-day)

FR = feeding rate of a cottontail rabbit (0.237 kg/day)

bw = body weight of a cottontail rabbit (1.229 kg)

The TRV (rabbit) was not adjusted for body size since a rabbit was used in the TRV calculation.

The following procedures were used for deriving TRV for the whitetailed deer, bobwhite quail, and cottontail rabbit when MTLs were not available, and for species that did not have MTLs. Their TRVs were determined using No Observed Adverse Effects Levels (NOAELs) or Lowest Observed Effects Levels (LOAELs). When available, the NOAEL or LOAEL from the Integrated Risk Information System (IRIS) was used in the TRV development. However, if a toxicity value was not available from IRIS, then one was obtained from various literature sources including Agency for Toxic Substances Registry Toxicological Profiles, Toxicological Benchmarks for Wildlife (Opresko *et.al.*, 1994) and published articles. Chemicals that only had diet concentration (as opposed to NOAELS) were converted to TRVs using the above equation and the appropriate consumption rates and body weights. The attached table contains the respective body weights used in the TRV adjustments.

As is presented in the attached table, toxicity data from many species were used to develop the TRVs. The attached table presents which animal was used to develop a particular TRV in parentheses. When possible, the chronic reproductive or developmental NOAEL value was used in the development of the TRV. However, in some instances, only a subchronic NOAEL or a chronic or sub-chronic LOAEL

APPENDIX P.1
DERIVATION OF TERRESTRIAL REFERENCE VALUES
OPERABLE UNIT NO 11 (SITE 80)
REMEDIAL INVESTIGATION, CTO-0274
MCB, CAMP LEJEUNE, NORTH CAROLINA

for some chemicals were found in the literature. If a LOAEL was used, the number was divided by 10 as an uncertainty factor. If a subchronic value was used it also was divided by 10 as an uncertainty factor. Finally, toxicity values were not found for all the chemicals. Where possible, the toxicity of a similar chemical was used for these chemicals (i.e., using endrin for endrin aldehyde). The attached table identifies, in parentheses, which chemicals were used as surrogates.
